

[Sponsorship email: To AEye.ai]

Greetings from Team Abhiyaan!

We hereby present you with an exciting sponsorship opportunity to help us reach our goal of building an autonomous vehicle with control for a dynamic environment. Team Abhiyaan is an enthusiastic group of multi-disciplinary students of IIT Madras, committed to building intelligent, robust, precise and safe ground navigation systems.

We are widely recognized and have a reputable track record in international competitions such as the Intelligent Ground Vehicle Competition (refer to [teamabhiyaan.com](http://teamabhiyaan.com) for further details) to back us up when we say we are highly devoted to our goal of automation. We are extremely intrigued at the prospect of getting to work with the technology you have pioneered.

Therefore, we would like to propose that you sponsor us with your revolutionary 4Sight LiDAR sensor's capabilities. Your product would be used in building BOLT - the autonomous electric vehicle which will be presented in the self drive challenge of IGVC and will be the face of our sponsors for the event.

We hope that we've made our case in showing the fruitful outcomes a possible sponsorship could present. Kindly take our proposal under consideration. Please contact our management team at <email> if you wish to discuss the sponsorship in further detail. Hoping to join hands with you in building the future of safe autonomy!

Regards,  
Team Abhiyaan

REASON I CHOSE AEye.ai:

Proper sensing of the surrounding environment goes a long way in building an efficient autonomous system. Their product ensures intelligent, adaptive, AI-driven sensing techniques which provides highly accurate data regarding the surroundings.
